## V88 HAWK

What all the operational forces and emergency personnel know: Man and harness must form a unit. The HAWK is more than just a harness, its low weight, robust design and easy handling bring the typical "Action-harness" characteristics.

- 1 The H-type chest harness provides many specific advantages for the professional user.
  - increased safety during overhead falls and similar critical fall positions
  - active support of the upper body in case of a fall
  - no noticeable restrictions on freedom of movement in the upper body, neck and neck area
  - there is no anchorage point on the back, that makes it much more comfortable while wearing compressed air breathing apparatus or backpacks
- 2 The aluminum-forged ring is positioned as close as possible to the users center of gravity. This allows best freedom of movement and relaxed working in the rope.
- 3 Chest anchor point.
- 4 A continuous webbing connects the upper with the lower part of the harness. This saves weight and brings much flexibility.
- 5 The Croll type chest ascender with a DELTA screw-link is available as an accessory. The Croll is fitted to the harness with a narrow webbing strap (supplied), fixed to the rear part of the central webbing with an adjustable mini sliding buckle. Thus, the chest ascender stays always in the right position and close to the body.
- 6 Asymmetrical **Cobra**® click buckles ensure optimal functionality with a large safety factor.
- 7 By optimizing the webbing design and the leg padding, much comfort could be gained in the crotch area.
- 8 High-tech webbings with high breaking loads and wear resistance are used. They are **TEFLON**® or **NANODIRT**® coated- against the penetration of dirt, oil or grease. Some come impregnated with silver ions, which have an antibacterial and antifungal effect.
- 9 The carefully designed and calculated seam patterns, precisely sewn on state-of-the-art CNC machines, offer maximum safety and an increased service life of the **HAWK** up to 10 years.
- 10 The multi-layer asymmetrical **EVO-III** back padding is perfect anatomically shaped and provides highest comfort. The internal 3D fabric as well as its shape allow a good removal of the heat generated here
- 11 A Walkie Talkie can be attached here.
